

Utility Systems: An Overview

E/One Utility Systems has led the way in the development of condition monitoring and predictive maintenance systems for electric utilities and independent power producers. Now an internationally recognized leader in the field, E/One Utility Systems, an ISO 9001 accredited organization, can assist you in safeguarding your operation, help you prevent downtime, and ultimately increase profitability. Today, more than 3,000 of our systems stand vigil worldwide, helping power producers increase efficiency, improve maintenance practices, and avoid costly disruption to operations.

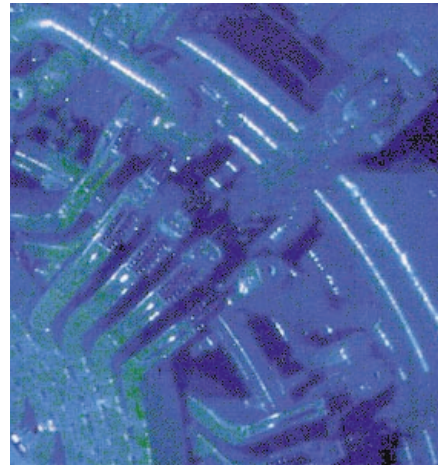

E/One Utility Systems has a range of products and services spanning the areas of critical gas monitoring and control, including condition monitoring, predictive maintenance, and peripheral auxiliaries associated with generator gas cooling and seal oil systems.

Equipment for hydrogen-cooled generators

- Generator Gas Analyzers (GGA)
- Generator Gas Dryers (GGD)
- Generator Condition Monitors (GCM-X)
- Gen-Tags
- Gas Stations — combining multiple technologies
- Value-Added Services

Equipment for air-cooled generators

- Generator Condition Monitors (GCM-A)
- Gas Stations — combining GCM-A and Partial Discharge monitoring

*Environment One Utility Systems
is an ISO 9001 registered firm.*
